New York State Fleet Managers Electric Vehicle Technology Showcase & Business Forum July 1, 2009

Sustainable Electric Vehicle Technology for the Low Carbon Economy

Achieving PlaNYC2030 Transportation Goals Today

Sustainable electric vehicle (EV) technology made available from Smith Electric Vehicles U.S. (Smith-U.S.) has paved a viable pathway for New York City agencies to start achieving PlaNYC2030 goals today.

Join a visionary group of industry experts from zero emission vehicle (ZEV) manufacturing, smart-grid technology, New York State fleet managers and officials for a presentation about Smith-U.S.'s new portfolio of commercial all-electric vehicles and discussion about the role sustainable EV technology plays in accomplishing PlaNYC2030 objectives.

Smith Newton

Smith Newton Aerial Truck

Smith-U.S.'s Newton is the world's first commercial ZEV to achieve new vehicle emissions certification from the State of California and is the world's largest battery-electric-powered truck.
